

1. Opening Topic: Project Team Structure

The meeting opened with a broad organizational question:

- Whether the club should create **different teams for different projects**

This suggests that from the beginning, the group was already thinking about how project work would be divided and managed in practice.

2. Officer Roles and Board Structure

The first major discussion concerned club leadership and administrative structure.

Roles Mentioned

- Officer
- CEO
- Business Manager

Related issues attached to the Business Manager role included:

- Source?
- Non profit
- Fund for game

These notes suggest discussion around:

- where funding would come from,
- whether the club would operate in a nonprofit framework,
- and how game development efforts might eventually be funded.

Board Positions Recorded

The following board structure was written down:

- **President:** Samuel Kuhns
- **Vice President:** Jack Carluccio
- **Business Manager:** Gautam Udupa

- **Scribe:** Kevin Li

The notes specifically state that Kevin Li was **just appointed**, indicating that the Scribe role was assigned during this meeting.

3. Constitution and Official Club Requirements

The second major topic was the club constitution and the requirements for official recognition or formal organization.

Items recorded in the notes include:

- We need two people
- Secure current of 10 ppl
- President, VP, BM
- FULL time for adviser
- Electronic signature
- Draft constitution

Taken together, these notes indicate that the group discussed the need to establish the club formally through:

- sufficient membership numbers,
- required officer positions,
- a full-time adviser,
- electronic signatures,
- and a drafted constitution.

This portion of the meeting appears to have focused on the procedural steps necessary to make the club institutionally valid and operational.

4. Decision for the Next Meeting

The meeting then established a clear direction for the next session:

- Next meeting just about projects

This implies that the current meeting was primarily focused on organization and setup, while the next meeting would shift attention toward actual game ideas and project planning.

5. Jayden' s Early Departure

The notes record:

- Jayden left at 14:43

This appears to be the only explicit departure time noted.

6. Sam' s Scratch Games

After the club-structure discussion, the conversation moved into games and examples of prior work.

The notes state that:

- Sam got his Scratch games

Qualities mentioned include:

- cool music
- music made by his brother
- cool graphics
- cool physics

This suggests that Sam showed previously made Scratch-based projects and that the group discussed their presentation, audiovisual style, and gameplay feel.

7. Discussion About the Nature of the “Physics”

The notes then contain a more questioning or analytical set of remarks about what exactly was meant by the game's "physics."

Items recorded include:

- angular physics
- Physics 1 type physics
- "so?"
- kinetic energy conservation? — unknown
- shield protecting against asteroids? — no
- acceleration in space? — no
- missiles? — no

These notes suggest that the "cool physics" label may have been examined critically and that the mechanics shown were likely not a deep or formal simulation of physics concepts, but rather a lighter gameplay-oriented use of physical behavior.

One final note in this cluster appears incomplete and is preserved best as a fragment.

8. Gautam's Game Interests

Gautam's interests or examples were recorded as:

- Voxel game
- Snow
- Vintage Story
- Hytale

This suggests interest in voxel-based game design and possibly in survival / sandbox / world-building styles influenced by games like Vintage Story and Hytale.

9. Jack / HazardousBlizzard's Roblox Soccer Game

The notes then describe Jack (HazardousBlizzard) showing one or more Roblox games.

Content Mentioned

- The game was about **soccer**
- Players kick a soccer ball
- Other people can help with the soccer play
- There were also many terrain elements

This appears to describe a Roblox-based soccer game with multiplayer or cooperative elements and some environmental complexity.

Monetization Discussion

The meeting also appears to have touched on monetization:

- “How to make money”
- “You need to monetize it well”
- “1200 CCU”

This suggests that the game was not only discussed in terms of gameplay, but also in terms of retention, scale, and possible business viability.

Here, CCU likely refers to **concurrent users**.

Roblox Platform Notes

Additional short notes included:

- **Roblox**
- **LUAU**
- and a negative comment about the current state of the platform ecosystem

This indicates that Roblox’s technical stack was acknowledged, while the broader platform content ecosystem may have been viewed critically.

10. Cube 4D

A brief standalone note records:

- **Cube 4D**

Because the context is limited, this is best preserved as an idea or concept that came up during discussion, possibly referring to:

- a game idea,
- a geometric concept,
- or a possible project direction.

No firmer interpretation can be made from the notes alone.

11. Later Sam Discussion

A later note reads:

- **Sam (15:25)**
- “More about games that we care”
- “Money? People care? IDK”

This appears to mark a return to a broader strategic question:

- What kinds of games do the members actually care about making?
- Will anyone care about those games?
- How should money or audience considerations factor into project choice?

The notes suggest that these questions were raised but not fully resolved.

12. Engine Possibilities

The final technical note states:

- **We might use Unity, Unreal, Script as engines**

This indicates that no final engine decision had yet been made at this stage.

Possible directions under consideration included:

- Unity
- Unreal
- and some scripting-based workflow or toolchain, though the exact meaning of “Script” is unclear from the notes.
